

marble & granite service

The background of the image is a light gray marbled pattern with swirling, organic shapes. In the center, there is a solid black rectangle. Inside this rectangle, the text "Marble & Granite Service" is written in a bold, white, sans-serif font. Below this text is a thin white horizontal line, and further down, the words "TheCompany" are written in a white, sans-serif font.

Marble & Granite Service

TheCompany

The company was founded in 1998 by Francesco Farina, intertwining the knowledge on quarries and materials with the commercial experience gained on the main international markets, as a sales manager first, and later as a managing director of various companies linked to both materials and machinery.

Since its first years, MSG set up a network of customers, mainly abroad, who turned slabs into floors, kitchens, stairs, floors and other manufactured products, thus moving the company's mission towards a continuous service of information and research for new colours, materials and various finishes, providing the market with innovation, imagination, opportunities and the touch of madness which is typical of those who are constantly looking forward to innovate.

MGS Market

Our main markets are the USA, Canada and Europe (England, Ireland and Sweden in particular).

New commercial interests lately moved to the USA, where in 2010 MGS USA was born, with the purpose of relocating the distribution and be closer to customers and their needs, granting a better service to the areas of greatest commercial interest.

2006

The 2006 crisis changed the market radically. Hence the company started to shift its commercial axis and its focus towards 3 main directions:

Development

In emerging countries such as Russia, India and China, where the demand for high-end materials and exotic colors is increasing.

Care

of high-end projects, with integrated services such as the laying measurement and development of drawings with the consequent production records.

Exploration

thanks to the deep knowledge of the materials and the possibility to create more and more new finishes by searching for new and unique colors. This allows natural stone to fit into new markets and sectors that used to employ it little and limitedly, such as high-luxury shipbuilding industry and hospitality, by making elevators for 5-star hotels, swimming pools and Spas.

2008

NINE SQUARE HOTEL

In 2008 we realized our first major project, the Nine Square Hotel in Belgrade, which made architect and designer Isay Wenfield win the Wall Paper Awards and ranked 6th among the most exclusive hotels in the world. Many new projects around the world followed: the Delano hotel in Miami, Hilton Hotel in Montenegro in collaboration with Arch Krecic, the Nobu Restaurant in Dohain Qatar with Rockwell Group and Boulus Group, as well as various private residences in Italy, Brazil, Russia, UK, USA and China, where unique marbles and precious stones from all over the world were used and worked exclusively in Italy.

IN THE SERVICE OF DETAILS

Design

Our technical department has all the skills required for the elaboration of executive drawings of a project for cladding, flooring, tables, kitchens, bathrooms and more.

On-site measurement

For your projects, the MGS specialized staff carries out detailed surveys, necessary for the production of customized products.

Quality control

Thanks to the in-depth knowledge on the materials and production phases (from the block cutting to the realization of the finishes) carefully selects materials and guarantees the best quality, to offer a high-level product. Our mission is to satisfy the most demanding customers. Therefore, the MGS team personally checks the quality of every single good since in the selection phase, up to the time of loading.

Customer service, a fundamental point in the MGS philosophy, has been extended even after laying, providing real post-installation maintenance packages

Installation

MGS can provide a complete installation service for any work, carried out by our expert specialist collaborators. Our experts can also carry out, supervise any work and adjustments during construction, ensuring precision and refinement in the details.

Treatments

Based on the characteristics of each material, MGS can provide direct assistance for the treatment of natural stone surfaces that best suits your needs. Following the installation, we suggest each customer a maintenance/maintenance plan for stone surfaces, also thanks to the close collaboration with FILA solutions ®.

Technical Info

Thanks to the experience gained, MGS can provide any technical and structural information on the materials supplied. We always orient our customers towards the choice of materials that best respect the characteristics required of a material based on the use.

2014

TAKE A LOOK

In 2014, after about one year of development, we launched "MGS Take a Look", a new mobile app which applied a variety of materials (from an archive containing about 600 colors) to many predefined environments of choice, giving an example of what the final result can be.

This app aims to provide a tool for architects and all the professionals making just-in-time service their strenght, to define the project later.

We are selling a dream which aims to a project in which we can take part in all the steps of development.

MGS Take a look

The new way to combine natural stones

2019

NEW WEBSITE

in 2019 a new interactive website is born to allow customers to choose and book slabs online, always up to date on availability and new colors.

2017

GALLERIA OF STONE

In 2017 the "Gallery of Stone AZ" was inaugurated in Phoenix, Arizona, where it presents itself as a veritable gallery of various types of natural stones; much more than just a showroom, a way to tell the US too what MGS is in the world.

Mission

Choosing natural stone means searching for its uniqueness. Each block and slab presents itself through its uniqueness, shaping places whom the refined mood of those who live there identify with. MGS srl proposes itself as an open book offering customised scenarios and an incredible variety of materials and colors to be applied and integrated in order to mold distinguished, emotional and special environments. Through years the company has been specialising to embrace ad accompany customers in granting their wish, offering a complete service.

A Natural Passion

Natural stone has always been part of human history, where it has been used in most of the oldest and greatest monuments in the world, like the pyramids of Giza, the Colosseum in Rome and the Arena in Verona. It has also become an important art element in sculpture, mosaics and marquetry.

Natural Stones

When choosing natural stone for a project, we should always remember history to give it more character.

We need to consider each block as the result of a million-year transformation which made it a unique picture from our past.

The colour variation, the appearance of fossils in the stone, the different veinings are proof of its unicity. As each piece was shaped by nature differently, natural stone is very versatile and it can be used in many different settings, from a Luxury classical look to the most modern and contemporary locations.

Uses

Natural stone is a material that can be used in almost every kind of project, according to the specific characteristics of the specific material and the project. Floors, upholsteries, facades, small or big furnishing objects are only a few examples in which is possible to use natural stone.

Wall Appliances

Marble is a calcareous stone with medium hardness and is formed by fine-grained crystals. Thanks to its composition, we can get excellent results in polish finishing. Marble is mostly recommended for internal uses.

Granite is a high-hardness volcanic stone, mainly composed by silica and quartz. Granite has high resistance to usury, abrasion and compression. They come in a wide variety of colorings. They are aesthetically speckled, solid hued or marbled. Thank to their composition they are long-lasting and suitable both for internal and external use.

Travertine is a porous calcareous stone. its color varies between white and silverbeige, yellow, red and dark brown. Its surface can be honed and polished but it can be worked with other finishing as well. It is suitable for both internal and external use, as long as the setting is not too cold.

Wall Appliances

Onix is a fine-grained calcareous or siliceous stone: it depends on the extraction area. These stones are prestigious and they are used for upholsteries and decorations. Most of the onyx can be backlit and they are thus considered the most precious stones for interior design.

Limestones are sedimentary rocks with a possible intrusion of animal or plant fossils. They are usually difficult to polish because they are softer than the other natural stones and therefore they will not get a high-shining surface. They are mostly recommended for interiors but some limestones, in different thicknesses, are also suitable for outdoor use.

Quartzites has some physical mechanic characteristics in common with many types of granite. They have a good hardness and they are generally used for internal and external finishing.

Services

Fixing: MGS offers a complete installation service for any material by our team of experts. We guarantee precision and care for details, also offering adjustments during the installation.

Treatments: MGS Provides the correct treatment for the use and characteristics of each material.

Measurements: Our staff can take detailed measures and work out all the technical drawings which are necessary to process the selected materials correctly.

Technical Informations: Thanks to its experience, MGS can provide any technical or structural information about the materials.

Quality Check: MGS commits to maintaining the top quality of our materials. Our staff checks the quality of each lot in order to guarantee maximum satisfaction to our clients.

New Services: Innovation represents a fundamental part of MGS's growth path, as we demonstrated by combining different materials such as glass and natural stone, hence providing high quality and excellent performances.

Finishings

honed finish: Honed finish will give a beautiful smooth and matt look to the natural stone surface. To obtain this finish, we use the latest polishing machines with several round disks, each with the different grain of polishing, to polish the slabs. The final product can be used for interior or exterior uses.

Polished finish: Polishing is the most selected and used finish on natural stone. It reveals and enhances its aesthetically and chromatic qualities. In fact, thanks to their shininess, they give great prestige to the location.

Leather finish: Leather technique is used with aesthetic purposes. Initially the slabs are rough-cut and then brushed with special brushes in order to remove all the imperfection and to obtain a beautiful smooth brushed surface. It was called leather to evoke the leather feeling, with a sensation of smoothness and uniformity. It is suitable for contemporary and elegant interiors.

Flamed finish: The flamed technique is obtained from high temperature machines. Thermal shock burns the slabs's first layer and make the stone rough, vitreous, non-slip and resistant to bad weather. Thanks to these characteristics the obtained stone is perfect for external uses. Aesthetic effect is unvaried and natural. Not all natural stones can be finished with this technique.

Colorscape

Considering the design field we can notice the color preference is mostly subjective. The reaction to a color frequently changes from person to person. It might depend on the personal preferences or on the cultural background.

We can then consider the color theory as an exact science: nowadays these studies has become a proper job. A slight change in shade or color saturation is enough to recall a different feeling. For example what represents happiness in a country can be found depressing in another, due to cultural differences.
